

# CITIZEN SCIENCE

## MEET OUR PANEL OF EXPERTS

[citizensciencecri.eventbrite.co.uk](https://citizensciencecri.eventbrite.co.uk)  
Saturday 27 March 2021  
10am - 12pm

**DR ANDREW BLADON**  
University of Cambridge

Andrew is a conservation ecologist interested in the impacts of climate and habitat change on species distribution and abundance, and passionate about testing conservation interventions to reverse species declines.

**CHANTAL HELM**  
Cambridge Botanical Garden

Chantal is the Higher Education and research impact coordinator at Botanic Garden at the University of Cambridge.

**PROF DAVID COOMES**  
University of Cambridge

David is the Director of the Conservation Research Institute. His research aims to gain a greater understanding of the ways that forests are changing, and the reasons for those changes using remote sensing technologies to monitor change.

**DR GWEN HITCHCOCK**  
Wildlife Trust BCN

Gwen is the Senior Monitoring and Research Officer at The Wildlife Trust Bedfordshire, Cambridgeshire, Northamptonshire

**BRIAN EVERSHAM**  
Wildlife Trust BCN

Brian is Chief Executive of the Wildlife Trust BCN. His extensive natural history expertise covers invertebrates as well as plants and birds, and his knowledge of ecology and conservation issues will add great interest to any trips he leads.

**PROF BILL SUTHERLAND**  
University of Cambridge

As part of the Conservation Science Group, Bill is interested in applying ecological data and models to understand conservation problems. This may involve fieldwork, use of existing data, or purely theoretical problems.

**MATTHEW HAYES**  
University of Cambridge

Matthew is interested in studying the ecology, behaviour and habitat requirements of invertebrates in the UK so that appropriate management can be implemented to maintain biodiversity on our fragmented reserves
